

e l e r o

No power supply?
No problem.

RoSolar from elero

Ecological and efficient:

Drive solutions for the motorisation of visual and sun protection without electricity

- Controllable via radio transmitter or smartphone
- Product bundles tailored to the local conditions
- Quick and easy installation

Autonomous drive systems:

RoISolar

for roller shutter motorisation.

The drive system is powered by solar energy and thus represents a particularly sustainable solution for the automation of roller shutters.

Summer houses and garages in peripheral locations, old buildings and extensions ... often a missing mains connection at the window leads to the fact that motorization is not used. RoISolar uses the power of the sun and brings more comfort and security into your home.

Clever control via smartphone or hand-held transmitter

Control using radio transmitters or – thanks to Centero Home – with the aid of a smartphone or a tablet makes the innovative system comfortable and user-friendly. The power-saving, bidirectional ProLine 2 DC radio system ensures minimal standby consumption and provides reliable feedback.
